

Professional flight
planning that saves
time and reduces delay

Flight Sentinel provides cost saving solutions to terminal congestion or adverse weather. With Flight Sentinel, your aircraft will operate more efficiently via a combination of our personalized flight planning, live flight monitoring, and real-time FAA advisories delivered via datalink communications. Your crews will benefit from our direct link with the FAA's Air Traffic Control System Command Center (ATCSCC), enabling them to make better-informed decisions that enhance safety and keep passengers on schedule.

"Your service has once again proven to be invaluable to us. On a high priority charter flight from Southern California to the East Coast, where a winter storm had slowed or stopped most traffic, your service got us off the ground on time and saved us an hour of ATC delays."

Minimize delays

Utilizing effective real-time flight management methods, Flight Sentinel is designed to reduce or eliminate costly delays, improving the efficiency of your flight department and keeping passengers satisfied. Flight Sentinel incorporates state-of-the-art flight management tools to offer subscribers the benefits of the FAA's Collaborative Decision Making (CDM) program. During a ground delay, CDM aircraft receive priority over non-participants, a benefit previously enjoyed only by the airlines.

Flight Sentinel stays with your aircraft every step of the way. Our experienced staff continuously monitor traffic and weather conditions along your flight path, providing essential information and timely guidance via datalink communications when needed.

Receive the most efficient routes possible

Often severe weather or gridlock traffic conditions prevent aircraft from utilizing published ATC preferred routes resulting in dropped clearances, undesirable routing and expired departure slots. Flight Sentinel coordinates with the FAA to identify problems early and to protect your crew and passengers from these costly delays with the application of the latest FAA provisional route strategies.

Enhance your situational awareness

Flight Sentinel utilizes datalink communications to provide your crew with maximum situational awareness. We provide rapid notification of FAA traffic management initiatives, severe weather, ATC holding and other significant events affecting your flight. Even after take-off, Flight Sentinel's staff actively monitor your flight to help you avoid traffic conflicts, sidestep inclement weather and make a safe approach. Flight Sentinel won't rest until your aircraft arrives safely on time.

Subscription packages suited to your needs

Honeywell's Global Data Center offers multiple subscription options and fleet discounts to Flight Sentinel customers.

***Annual subscription plans:**

1 aircraft	\$5,750
2-5 aircraft	\$5,500 per aircraft
6-10 aircraft	\$5,250 per aircraft
11 or more aircraft	\$5,000 per aircraft

*Additional discounts are available. Subscription rates are subject to change

For further information on how Flight Sentinel can enhance your flight operations, contact the Flight Sentinel team at (888) 634-3330, option 2; or e-mail us at fs@mygdc.com. Additional information is also available on line at www.myGDC.com.
